

New Product Bulletin – Mini Bar Hanger & Bar Hanger Extenders*

Our new **Mini Bar Hangers** (1287-10) extend from 9” to 15-1/4”;
 ideal for fitting between either 12” or 16” spaced joists. These contain
 all the features of our Premium 1287 Bar Hangers, except they are able
 to fit within the confines of reduced spaced joists.

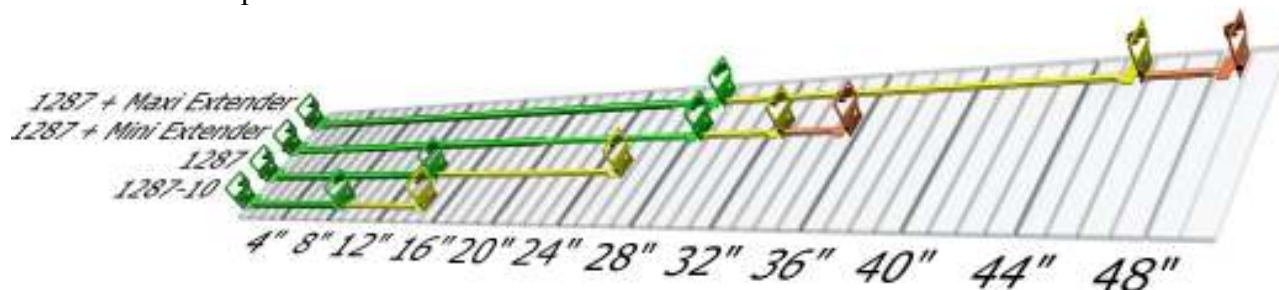

Also new are our **Bar Hanger Extenders***. Maintaining the same
 formed cross-section of our Premium Bar Hangers, the extenders fit
 between each bar hanger half, offering much increased capacity.

The Bar Hanger Extenders are available in two sizes; the mini
 extenders (1287-50) & maxi extenders (1287-60). Like the bar hangers,
 there are stops to prevent them from slipping apart, yet if necessary, this
 can be overcome with a solid tug.

The diagram below shows the bar hangers coupled with the extenders. Minimum spans are shown in **green**, and
 the maximums in **yellow** and **orange**. The **yellow** illustrates the maximum spans at the second set of stops, where
 there is approximately 2” of overlap at each joint, offering good rigidity. The **orange** illustrates the ultimate
 extension at the first set of stops, reducing the overlap to 1”. Rigidity is compromised somewhat at such extremes,
 but squeezing the joints once the assembly is extended improves this, offering an extreme solution that would have
 otherwise been impossible.
